Daniel Onyeachonam

Software Engineer

SUMMARY

Software Engineer with 2+ years of professional experience designing, developing and maintaining robust software solutions across the application stack. Experienced in building scalable backend services, intuitive client-side applications and efficient data-driven systems, with a strong foundation in software architecture, database engineering and cloud-native technologies. Passionate about writing clean, maintainable code and engineering reliable solutions that solve real-world problems.

WORK EXPERIENCE

Moniepoint Inc.

02/2024 – Present

Lagos, Nigeria · *Fintech and digital banking platform for businesses and individuals across Nigeria*

Backend Engineer — 09/2025 – Present

- Re-architected **transaction report generation** into an asynchronous streaming pipeline that processes **20M+ records per run** at a constant memory footprint, slashing generation time from over an hour to **2–5 minutes** and eliminating out-of-memory failures in production.
- Boosted **settlement throughput by over 90%** by profiling the settlement pipeline, eliminating processing bottlenecks, and optimising queries and indexes on high-volume tables.
- Co-designed and delivered a re-engineered **Settlement Agent**, migrating its event messaging from **Apache Kafka** to **Redis Streams** to meet new product requirements while sustaining **4.65M+ settlement records per day** for interbank partner transfers.
- Co-designed and shipped **Reversals & Refunds** across the transaction-processing flow, leading impact analysis and technical deep-dives across **2 cross-functional teams**, co-authoring QA test cases, and driving the feature through to production.
- Introduced end-to-end **observability** across **4 services** with **OpenTelemetry** and **New Relic** (distributed tracing, metrics, dashboards, and alerting), cutting incident detection time **from hours to minutes**.
- Resolved **20+ production incidents** end to end, from root-cause analysis to fix and follow-up, with an **average turnaround of 30 minutes**, strengthening platform stability and partner trust.
- Stepped in as **frontend engineer** (React, TypeScript) during a frontend staffing gap, building UI features and integrating them with backend APIs to keep releases on schedule.
- Mentored **2 junior engineers and interns** and reviewed pull requests, raising the bar on code quality, testing, and service design.

Backend Engineer Intern — 02/2024 – 08/2024

- Built and launched the **Family Businesses case-study website** end to end, integrating **Google Analytics** for user-behaviour tracking and the **Google Sheets API** for automated data collection.
- Engineered a **SendGrid**-powered mailing service that delivers the case study on demand and captures recipient data, **reducing communication delays by 20–50%**.
- Developed and tested scalable **RESTful APIs** and shipped new features across a fault-tolerant **microservices** architecture, backed by end-to-end tests and robust error handling.
- Delivered responsive frontend features integrated with backend APIs, owning delivery from UI to service.
- Contributed to QA sessions, code audits, and design deep-dives for new features, helping **cut bugs by over 80%** on owned services.

CONTACT

Location: Lagos, Nigeria
Phone: +234 907 387 0133
Mail: daniel.onyeachonam@outlook.com
LinkedIn: Daniel Onyeachonam
GitHub: beatsbydan
Portfolio: daniel-onyeachonam

SKILLS

Languages
- Java
- TypeScript / JavaScript
- Python
- SQL

Backend
- Spring Boot
- Node.js, Express.js
- REST APIs, Microservices
- Apache Kafka

Data
- PostgreSQL, MySQL, MSSQL
- Redis, Supabase

Cloud
- AWS, GCP, DigitalOcean

DevOps & CI/CD
- Docker, Kubernetes
- Jenkins, Harness, GitLab CI
- Argo CD, Git

Observability
- OpenTelemetry, New Relic

Frontend
- React, Next.js
- React Native, Tailwind CSS

AI-Assisted Engineering
- Claude Code (agentic development)
- Claude API (LLM integration)

CORE STRENGTHS

- Full-Stack Software Development
- System Architecture & System Design
- API Design & Systems Integration
- Database Engineering
- Cloud-Native Development & Production Reliability
- AI-Assisted Software Delivery

EDUCATION

B.Sc. Software Engineering
Bowen University · 2022 – 2025

OTHER

Languages: English
